Test Bank for Essentials of Computer Organization and Architecture 6th Null

Access Complete Test Bank for Essentials of Computer Organization and Architecture 6th Null

Multiple Choice

1. Many desktop computers use the _____ bus standard in which the system augments its main bus with dedicated I/O buses using expansion slots.
A) enhanced integrated bus
B) serial advanced technology attachment
C) universal serial bus
D) peripheral component interconnect

Ans: D
Complexity: Moderate
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

2. Which organization sets standards for photographic film and the pitch of screw threads, in addition to matters concerning computers?
A) ISO
B) IEEE
C) CCITT
D) ANSI

Ans: A
Complexity: Easy
Ahead: Standards Organizations
Subject: Chapter 1
Title: Introduction

3. The first general-purpose programmable electronic computer was the:
A) ENIAC.
B) IBM 650.
C) Atanasoff-Berry computer.
D) DEC PDP-1.

Ans: A
Complexity: Easy
Ahead: Historical Development
Subject: Chapter 1
Title: Introduction

4. We study computer _____ to become familiar with how circuits and signals collaborate to create working computer systems.
A) architecture
B) organization
C) layers
D) programming

Ans: B
Complexity: Easy
Ahead: Overview
Subject: Chapter 1
Title: Introduction

5. There are _____ kilobytes in an exabyte.
A) 2^{20}
B) 2^{30}
C) 2^{40}
D) 2^{50}

Ans: D
Complexity: Moderate
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

6. The first supercomputer, the CDC 6600, had a memory size of:
A) 128 kilowords.
B) 256 megawords.
C) 128 gigawords.
D) 256 terawords.

Ans: A
Complexity: Easy
Ahead: Historical Development
Subject: Chapter 1
Title: Introduction

7. Infrastructure as a Service (IaaS) replaces the _____ of the computer hierarchy with an Internet-based infrastructure.
A) digital logic level through user levels
B) digital logic level through high-level language levels
C) system software level through high-level language levels
D) digital logic level through machine levels

Ans: D
Complexity: Moderate
Ahead: Cloud Computing: Computing as a Service
Subject: Chapter 1
Title: Introduction

8. There are _____ gigabytes in a terabyte.
A) 2^{10}
B) 2^{20}
C) 2^{30}
D) 2^{40}

Ans: A
Complexity: Moderate
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

True/False

1. True or False? Computer architecture encompasses all physical aspects of computer systems.

Ans: False
Complexity: Moderate
Ahead: Overview
Subject: Chapter 1
Title: Introduction

2. True or False? There are one billion microseconds in a second.

Ans: False

Complexity: Easy
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

3. True or False? Hot plugging means the same thing as Plug-and-Play.

Ans: False
Complexity: Moderate
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

4. True or False? A control unit consists of a central processing unit (CPU) with an arithmetic logic unit (ALU) and registers.

Ans: False
Complexity: Easy
Ahead: The von Neumann Architecture
Subject: Chapter 1
Title: Introduction

Fill-in-the-Blank

1. Expressed as a power of two, there are _____ kilobytes in a megabyte.

Ans: 2^{10}
Complexity: Moderate
Ahead: Overview
Subject: Chapter 1
Title: Introduction

2. Expressed as a power of two, there are _____ megabytes in a terabyte.

Ans: 2^{20}
Complexity: Moderate

Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

3. The statement, “The cost of capital equipment to build semiconductors will double every four years,” is known as _____.

Ans: Rock’s Law
Complexity: Easy
Ahead: Historical Development
Subject: Chapter 1
Title: Introduction

4. A kilobyte represents what power of two?

Ans: 10, Ten
Complexity: Easy
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction

5. Computers designed using the _____ architecture have two buses: one for data and one for instructions.

Ans: Harvard
Complexity: Moderate
Ahead: Non–von Neumann Models
Subject: Chapter 1
Title: Introduction

6. At the most basic level, a computer is a device consisting of three pieces: a processor, an I/O mechanism, and a(n) _____.

Ans: memory
Complexity: Easy
Ahead: Overview
Subject: Chapter 1
Title: Introduction

7. There are _____ nanoseconds in a millisecond.

Ans: 1,000,000
Complexity: Moderate
Ahead: An Example System: Wading Through the Jargon
Subject: Chapter 1
Title: Introduction
