Test Bank for Statistics for Business and Economics 14th McClave

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Solve the problem.

1) Which of the following is not the job of a statistician?
   A) determining what information is relevant in a given problem
   B) implementing new procedures based on the results of a study
   C) collecting numerical information in the form of data
   D) determining whether the conclusions drawn from a study are to be trusted

   Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

2) What is statistics?

   Answer: Statistics is the science of data that involves collecting, classifying, summarizing, organizing, analyzing, and interpreting numerical information.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

3) A recent report stated "Based on a sample of 120 truck drivers, there is evidence to indicate that, on average, independent truck drivers earn more than company–hired truck drivers." Does this statement describe descriptive or inferential statistics?
   A) Inferential statistics
   B) Descriptive statistics

   Answer: A

4) A survey of high school teenagers reported that 82% of those sampled are interested in pursuing a college education. Does this statement describe descriptive or inferential statistics?
   A) Descriptive statistics
   B) Inferential statistics

   Answer: A

5) The average age of the students in a statistics class is 22 years. Does this statement describe descriptive or inferential statistics?
   A) Inferential statistics
   B) Descriptive statistics

   Answer: B

6) From past figures, it is predicted that 45% of the registered voters will vote in the March primary. Does this statement describe descriptive or inferential statistics?
   A) Descriptive statistics
   B) Inferential statistics

   Answer: B

7) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. The university is interested in using the information from the sample of 250 students collected to learn information about the entire student parking population. Would this be an application of descriptive or inferential statistics?
   A) Inferential statistics
   B) Descriptive statistics

   Answer: A

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

8) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Would this be an application of descriptive or inferential statistics?

A) Inferential statistics B) Descriptive statistics

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

9) In a survey of 5000 high school students, 17% of those surveyed read at least one best–seller each month. Give an example of a descriptive statement and an inferential statement that could be made based on this information.

Answer: Descriptive: 17% of the students sampled (or 850) read at least one best–seller each month.

Inferential: Based on the survey, we estimate that about 17% of all high school students read at least one best–seller each month.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

10) Which of the following is not an element of descriptive statistical problems?

A) patterns in a data set are identified B) predictions are made about a larger set of data

C) data are displayed visually in graphs D) information revealed in a data set is summarized

Answer: B

Answer the question True or False.

11) When we take data obtained from a sample and make generalizations or predictions about the entire population, we are utilizing inferential statistics.

A) True B) False

Answer: A

12) Statistics involves two different processes, describing sets of data and drawing conclusions about the sets of data on the basis of sampling.

A) True B) False

Answer: A

Solve the problem.

13) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 240 students and recorded how long it took each of them to find a parking spot. Identify the population of interest to the university administration.

A) the entire set of students who park at the university

B) the entire set of faculty, staff, and students who park at the university

C) the 240 students about whom the data were collected

D) the students who park at the university between 9 and 10 AM on Wednesdays

Answer: A

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

14) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 140 students and recorded how long it took each of them to find a parking spot. Identify the variable of interest to the university administration.

A) number of students who cannot find a spot
B) time to find a parking spot
C) number of empty parking spots
D) students who drive cars on campus

Answer: B

15) An assembly line is operating satisfactorily if fewer than 5% of the phones produced per day are defective. To check the quality of a day's production, the company randomly samples 30 phones from a day's production to test for defects. Define the population of interest to the manufacturer.

A) the 5% of the phones that are defective
B) the 30 responses: defective or not defective
C) all the phones produced during the day in question
D) the 30 phones sampled and tested

Answer: C

16) An insurance company conducted a study to determine the percentage of cardiologists who had been sued for malpractice in the previous seven years. The sample was randomly chosen from a national directory of doctors. What is the variable of interest in this study?

A) the responses: have been sued/have not been sued for malpractice in the last seven years
B) all cardiologists in the directory
C) the doctor's area of expertise (i.e., cardiology, pediatrics, etc.)
D) the number of doctors who are cardiologists

Answer: A

17) A study attempted to estimate the proportion of Florida residents who were willing to spend more tax dollars on protecting the Florida coastline from environmental disasters. Twenty–four hundred Florida residents were surveyed.Which of the following is the population used in the study?

A) Florida residents willing to spend more tax dollars protecting the coastline from environmental disasters
B) the 2,400 Florida residents who were surveyed
C) all Florida residents
D) all Florida residents who lived along the coastline

Answer: C

18) A study attempted to estimate the proportion of Florida residents who were willing to spend more tax dollars on protecting the Florida beaches from environmental disasters. Forty–nine hundred Florida residents were surveyed.Which of the following describes the variable of interest in the study?

A) the response to the question "Do you live along the beach?"
B) the 4,900 Florida residents surveyed
C) the response to the question "Do you use the beach?"
D) the response to the question, "Are you willing to spend more tax dollars on protecting the Florida beaches from environmental disasters?"

Answer: D

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

19) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the population of interest to the university administration.
A) the entire set of students that park at the university
B) the parking time, defined to be the amount of time the student spent finding a parking spot
C) the 250 students that data was collected from
D) a single student that parks at the university

Answer: A

20) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the sample of interest to the university administration.
A) the 250 students that data was collected from
B) the parking time, defined to be the amount of time the student spent finding a parking spot
C) the entire set of students that park at the university
D) a single student that parks at the university

Answer: A

21) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the experimental unit of interest to the university administration.
A) the parking time, defined to be the amount of time the student spent finding a parking spot
B) a single student that parks at the university
C) the 250 students that data was collected from
D) the entire set of students that park at the university

Answer: B

22) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the variable of interest to the university administration.
A) a single student that parks at the university
B) the parking time, defined to be the amount of time the student spent finding a parking spot
C) the entire set of students that park at the university
D) the 250 students that data was collected from

Answer: B

23) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the population of interest for this study.
A) the 500 NYSE stocks that current prices were collected from
B) a single stock traded on the NYSE
C) the current price (or closing price) of a NYSE stock
D) the entire set of stocks that are traded on the NYSE

Answer: D

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

24) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the sample of interest for this study.
A) the current price (or closing price) of a NYSE stock
B) a single stock traded on the NYSE
C) the 500 NYSE stocks that current prices were collected from
D) the entire set of stocks that are traded on the NYSE

Answer: C

25) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the experimental unit of interest for this study.
A) the 500 NYSE stocks that current prices were collected from
B) the entire set of stocks that are traded on the NYSE
C) the current price (or closing price) of a NYSE stock
D) a single stock traded on the NYSE

Answer: D

26) As part of an economics class project, students were asked to randomly select 500 New Your Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the variable of interest for this study.
A) the current price (or closing price) of a NYSE stock
B) a single stock traded on the NYSE
C) the entire set of stocks that are traded on the NYSE
D) the 500 NYSE stocks that current prices were collected from

Answer: A

27) A study in the state of Georgia was conducted to determine the percentage of all community college students who have taken at least one online class. 1500 community college students were contacted and asked if they had taken at least one online class during their time at their community college. These responses were then used to estimate the percentage of all community college students who have taken at least one online class. Identify the population of interest in this study.
A) the number of online classes a student has taken
B) all community college students in the state of Georgia
C) the response (Yes/No) to the question, "Have you taken at least one online class?"
D) the 1500 community college students contacted

Answer: B

28) A study in the state of Georgia was conducted to determine the percentage of all community college students who have taken at least one online class. 1500 community college students were contacted and asked if they had taken at least one online class during their time at their community college. These responses were then used to estimate the percentage of all community college students who have taken at least one online class. Identify the variable of interest in this study.
A) the 1500 community college students contacted
B) the response (Yes/No) to the question, "Have you taken at least one online class?"
C) all community college students in the state of Georgia
D) the number of online classes a student has taken

Answer: B

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

29) Which of the following is not typically an element of inferential statistical problems?

A) sample
B) census
C) variable of interest
D) measure of reliability

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

30) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 140 students and recorded how long it took each of them to find a parking spot. Identify the population, sample, and variable of interest to the administrators.

Answer: The population of interest are all students at the university who park. The sample is the parking times of the 140 students that were collected by the university administrator. The variable of interest to the administrators is the parking time variable.

31) A quality inspector tested 67 copiers in an attempt to estimate the average failure rate of the copier model. His study indicated that the number of failures decreased from two years ago, indicating an increase in the reliability of the copiers. Describe the variable of interest to the inspector.

Answer: The variable of interest to the researcher is the failure rate of the copiers.

32) A high school guidance counselor analyzed data from a sample of 900 community colleges throughout the United States. One of his goals was to estimate the annual tuition costs of community colleges in the United States. Describe the population and variable of interest to the guidance counselor.

Answer: The population of interest to the guidance counselor is all community colleges in the United States. The variable of interest is the annual tuition cost of the community college.

33) Explain why it is not necessary to provide a measure of reliability when a census is used rather than a sample.

Answer: When a census is used, there should be no error.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Answer the question True or False.

34) A variable is a characteristic or property of a population.

A) True
B) False

Answer: B

35) Measurement is the process of assigning numbers to variables of individual population units.

A) True
B) False

Answer: A

36) A census is feasible when the population of interest is small.

A) True
B) False

Answer: A

37) The process of using information from a sample to make generalizations about the larger population is called statistical inference.

A) True
B) False

Answer: A

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

38) A measure of reliability is an important element of a descriptive statistical problem.
A) True B) False

Answer: B

Solve the problem.

39) When we study a process, what is generally the focus?
A) the input B) the output C) the subprocesses D) the black box

Answer: B

40) In the context of processes, what is a sample?
A) any set of input B) any set of output
C) any subset of the population D) any set of subprocesses

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

41) What do we call a process whose operations are unknown or unspecified?

Answer: a black box

42) A chain of coffee shops has 45 stores in one metropolitan area. For liability reasons, the chain is interested in the average temperature of hot drinks served at the stores. Three stores were chosen and the temperature of every fifth hot drink served at each of these stores was recorded during a two–week period. At the end of the two–week period, the temperatures of 10,571 hot drinks had been recorded.

a. Identify the process of interest.
b. Identify the variable of interest.
c. Describe the sample.
d. Describe the inference of interest.

Answer: a. serving of hot drinks at coffee shops in the chain
b. temperature of hot drinks served
c. 10,571 drinks whose temperatures recorded over the two–week period
d. average temperature of all hot drinks served at all stores in the chain

43) A department store receives customer orders through its call center and website. These orders as well as any special orders received in the stores are forwarded to a distribution center where workers pull the items on the orders from inventory, pack the items, and prepare the necessary paperwork for the shipping company that will pick the orders up and deliver them to the customers. In order to monitor the subprocess of pulling the items from inventory, every 15 minutes one order is checked to determine whether the worker has pulled the correct item.

a. Identify the process of interest.
b. Identify the variable of interest.
c. Describe the sample.
d. Describe the inference of interest.

Answer: a. fulfilling customers' orders from receiving the order to pick up by shipping company
b. whether or not an order has been pulled correctly
c. the set of all orders that are checked (one every 15 minutes)
d. number or proportion of all orders that are pulled correctly (incorrectly)

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

44) The amount of television viewed by today's youth is of primary concern to Parents Against Watching Television (PAWT). 250 parents of elementary school–aged children were asked to estimate the number of hours per week that their child watches television. Identify the type of data collected by PAWT.
A) quantitative B) qualitative
Answer: A

45) The manager of a car dealership records the colors of automobiles on a used car lot. Identify the type of data collected.
A) qualitative B) quantitative
Answer: A

46) A postal worker counts the number of complaint letters received by the United States Postal Service in a given day. Identify the type of data collected.
A) qualitative B) quantitative
Answer: B

47) An usher records the number of unoccupied seats in a movie theater during each viewing of a film. Identify the type of data collected.
A) qualitative B) quantitative
Answer: B

48) A fan observes the numbers on the shirts of a girl's soccer team. Identify the type of data collected.
A) quantitative B) qualitative
Answer: B

49) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. What type of variable is the administration interested in collecting?
A) qualitative data B) quantitative data
Answer: B

50) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. What type of variable is being collected?
A) quantitative data B) qualitative data
Answer: A

51) A study in the state of Georgia was conducted to determine the percentage of all community college students who have taken at least one online class. 1500 community college students were contacted and asked if they had taken at least one online class during their time at their community college. These responses were then used to estimate the percentage of all community college students who have taken at least one online class. What type of variable is being collected?
A) quantitative data B) qualitative data
Answer: B

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

52) Which data about paintings would *not* be qualitative?
A) the theme B) the value C) the style D) the artist

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

53) Gender is one variable of interest in a study of the effectiveness of a new medication. For data entry purposes, the researcher conducting the study assigns 1 for Male and 2 for Female. Is the gender data quantitative or qualitative?

Answer: Qualitative; The numbers are arbitrarily selected numerical codes for the categories and have no utility beyond that.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

54) The amount of television viewed by today's youth is of primary concern to Parents Against Watching Television (PAWT). 330 parents of elementary school–aged children were asked to estimate the number of hours per week that their child watches television. Identify how the data were collected in this study.
A) from a designed experiment B) from a published source
C) from a survey D) observationally

Answer: C

55) A personnel director studied the eating habits of a company's employees. The director noted whether employees brought their own lunch to work, ate at the company cafeteria, or went out to eat lunch. This type of data collection would best be considered as a(n) _____.
A) observational study B) designed experiment

Answer: A

56) A student worked on her statistics project in the library and found a reference book that contained the median family incomes for all 50 states. On her project, she would report her data as being collected _____.
A) from a published source B) from a designed experiment
C) from a survey D) observationally

Answer: A

57) What method of data collection would you use to collect data for a study where a drug was given to 30 patients and a placebo to another group of 30 patients to determine if the drug has an effect on a patient's illness?
A) published source B) survey
C) observational study D) designed experiment

Answer: D

58) What method of data collection would you use to collect data for a study where a political pollster wishes to determine if his candidate is leading in the polls?
A) published source B) observational study
C) survey D) designed experiment

Answer: C

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

59) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the data collection method used by the administration in this study.
A) data from a designed experiment
B) data from a published source
C) data collected observationally

Answer: C

60) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the data collection method used in this study.
A) data collected observationally
B) data from a published source
C) data from a designed experiment

Answer: B

61) Does online teaching help or hinder student learning? To help answer this question, a statistics teacher decided to teach his three sections of a particular class using three different teaching models – a traditional face–to–face section, a completely online section, and a hybrid or blended section that incorporated both a face–to–face and online component in the section. Students were randomly assigned to the different sections, taught identical information using the different teaching formats, and given identical examinations to measure student learning. The goal was to identify if the teaching method used affected student learning performance. Identify the data collection method used in this study.
A) data from a published source
B) data collected observationally
C) data from a designed experiment

Answer: C

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

62) What is meant by a representative sample?

Answer: a sample that exhibits characteristics typical of those possessed by the population of interest

63) What is the most common way to satisfy the representative sample requirement?

Answer: selecting a random sample

64) Three female students and two male students are to be chosen from a group of 30 female students and 20 male students. Does this sample of five students satisfy the conditions to be a random sample of the 50 students in the group? Explain.

Answer: No; not every sample of 5 students from the group has an equal chance of selection; for example, a sample consisting of 5 males has no chance of being selected.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Answer the question True or False.

65) In an observational study, the researcher exerts strict control over the units in the study.
A) True B) False

Answer: B

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

66) When using data from a published source, it is not important to know how the data were collected and whether randomization was used.

A) True B) False

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

Solve the problem.

67) In one study of the moral of company's employees, 10 employees were randomly chosen from each of the departments within the company. Identify the sampling design used.

Answer: stratified random sampling

68) In an attempt to determine the ages of its customers, one store asked every tenth customer who entered the store his or her age. Identify the sampling design used.

Answer: systematic sampling

69) What term is used to describe the situation where sampling units contained in a sample do not produce sample observations?

Answer: nonresponse

70) What is meant by selection bias?

Answer: Selection bias is when a subset of the experimental units in the population is excluded so that these units have no possibility of being selected in the sample.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

71) Which type of problem has occurred when inaccuracies exist in the values of the data recorded?

A) selection bias B) measurement error C) nonresponse bias

Answer: B

72) A watchdog group is investigating how people are treated during the foreclosure process. Surveys were mailed to a random sample of 300 people who had recently been threatened with foreclosure. 75 of the surveys were returned by the postal service because the intended recipients had moved and left no forwarding address. What type of problem has occurred?

A) selection bias B) measurement error C) nonresponse bias

Answer: C

73) A university was interested in student reaction to a proposal to spend more on athletic scholarships and less on academic scholarships. 35 student athletes were surveyed. What type of problem has occurred?

A) measurement error B) nonresponse bias C) selection bias

Answer: C

74) The way in which an interviewer asks a question about political party affiliation causes respondents to answer that they have no affiliation when they actually do. What type of problem has occurred?

A) selection bias B) measurement error C) nonresponse bias

Answer: B

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

75) A student completing a research project for a criminal justice class obtained a radar gun for determining automobile speeds and recorded the speeds of automobiles passing a fixed location over a period of several hours. The student was unaware that the device needed to be recharged after two hours of use and that the speeds recorded after two hours were not reliable. What type of problem has occurred?

A) selection bias B) nonresponse bias C) measurement error

Answer: C

76) Because of the possible legal consequences, many people in a sample of the U.S. population chose not to participate in a survey regarding illegal drug use. What type of problem has occurred?

A) selection bias B) nonresponse bias C) measurement error

Answer: B

77) A middle school was interested in surveying their students to find out opinions about the schools media center. To facilitate data collection, the homeroom period was extended 30 minutes to allow everyone in the school ample time to respond to a short questionnaire. Unfortunately, it was learned after the surveys had been completed that all honors students in the middle school were on an all–day field trip and away from school for the entire day. The exclusion of their input into the survey would be considered which type of sampling problem?

A) measurement error B) nonresponse bias C) selection bias

Answer: C

78) A county planning commission is attempted to survey 1500 households from the counties 400,000 households. A random sample was selected and surveys were mailed to the randomly selected households, but only 1075 were returned. The inability to collect data from the 425 households that didn't return the survey would be considered which type of sampling problem?

A) measurement error B) nonresponse bias C) selection bias

Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

79) Define business analytics.

Answer: Business analytics refers to methodologies (e.g., statistical methods) that extract useful information from data in order to make better business decisions.

80) Define statistical thinking.

Answer: Statistical thinking involves applying rational thought and the science of statistics to critically assess data and make inferences.

81) Give an example of unethical statistical practice.

Answer: Researchers select a biased sample, with the intention of misleading the public.

82) A health food company has the following statement on their new product packaging: "Prevents all types of cancer!" (Fact: Past studies have shown that some ingredients in the new product have been know to possibly reduce the risk of many types of cancer). Discuss why it is unethical to make this statement.

Answer: Answers may vary. One possible answer is that the past studies show that the ingredients only have possible cancer reducing effects on many, not all, types of cancer.

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

83) A researcher studying malnutrition among children in a developing country collected weights of a random sample of children using a scale that she had set to give weights 2.5 kilograms less than the actual weight. Which statement best describes this situation?

A) Measurement error has occurred, but the researcher is not guilty of unethical statistical practice.
B) Measurement error has occurred, and the researcher is guilty of unethical statistical practice.
C) Measurement error has not occurred, but the researcher is guilty of unethical statistical practice.
D) Measurement error has not occurred, and the researcher is not guilty of unethical statistical practice.

Answer: B

Access Complete Test Bank for Statistics for Business and Economics 14th McClave

1) B
2) Statistics is the science of data that involves collecting, classifying, summarizing, organizing, analyzing, and interpreting numerical information.
3) A
4) A
5) B
6) B
7) A
8) B
9) Descriptive: 17% of the students sampled (or 850) read at least one best–seller each month.

   Inferential: Based on the survey, we estimate that about 17% of all high school students read at least one best–seller each month.
10) B
11) A
12) A
13) A
14) B
15) C
16) A
17) C
18) D
