

Test Bank for Life Span Development 16th Santrock

Chapter 02

Test Bank

1. Red-feathered and blue-feathered birds occupy the same environment. The birds with the red feathers are better able to survive and avoid predators. This means that the population of red-feathered birds should increase in future generations. This illustrates the process of:

- A. genetic selection.
- B. natural adaptation.
- C. natural selection.
- D. genetic survival.

Page: 49

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

2. _____ introduced the theory of evolution by natural selection in 1859.

- A. Sigmund Freud
- B. Charles Darwin
- C. Stephen Hawking
- D. Wilhelm Wundt

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

3. If a baboon learns to eat many different kinds of fruit instead of relying on only one kind for its nutritive needs, we would argue that this behavior promotes its survival. Thus, the behavior is:

- A. adaptive.
- B. aggressive.
- C. dominant.
- D. submissive.

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

4. Evolution takes place:

- A. over the course of many generations.
- B. almost immediately.
- C. when a species is ready for it.
- D. due to active attempts at change on the part of a species.

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

5. Psychology's newest approach, _____, emphasizes the importance of adaptation, reproduction, and "survival of the fittest" in shaping behavior.

- A. behavioral psychology
- B. humanistic psychology
- C. cognitive psychology
- D. evolutionary psychology

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary psychology

6. According to evolutionary developmental psychologists, many evolved psychological mechanisms are _____. That is, the mechanisms apply only to a specific aspect of a person's makeup.

- A.** domain-specific
- B. maladjusted
- C. non-operational
- D. unconditional

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

7. Which of the following statements is true about evolutionary developmental psychology?

- A.** Many evolved psychological mechanisms apply only to a specific aspect of a person's makeup.
- B. The mind is a general-purpose device that can be applied equally to a vast array of problems.
- C. All behaviors that were adaptive for our prehistoric ancestors serve us well today.
- D. Evolution has not impacted human development.

Page: 50

Accessibility: Keyboard Navigation

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

8. The food-scarce environment of our ancestors likely led to humans' propensity to gorge when food is available and to crave high-caloric foods—a trait that might lead to an epidemic of obesity when food is plentiful. This illustrates how:

- A. socialization influences the development of behavior and cognitive skills in human beings.
- B.** evolved mechanisms are not always adaptive in contemporary society.
- C. organisms pass on characteristics they had acquired during their lifetime to their offspring.
- D. the benefits of evolutionary selection decrease with age.

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

9. According to Paul Baltes, the benefits conferred with evolutionary selection _____ with age.

- A. increase
- B. stay the same
- C.** decrease
- D. fluctuate

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

10. According to life-span developmentalist Paul Baltes, the benefits conferred by evolutionary selection decrease with age. Natural selection has not weeded out many harmful conditions and nonadaptive characteristics that appear among older adults. Why?

- A. Degeneration aids in the transmission of desirable traits to future generations.
- B.** Natural selection operates primarily on characteristics that are tied to reproductive fitness.
- C. Human evolution has no effect on previous generations.
- D. Evolved mechanisms are always adaptive in contemporary society.

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

11. Paul Baltes says that natural selection among humans operates mainly during the _____ of life.

- A. second half
- B. last years
- C. first half**
- D. first year

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

12. As the benefits of evolutionary selection decrease with age, Baltes argues, the need for all of the following increases, EXCEPT:

- A. social support.
- B. medical technology.
- C. job training.**
- D. culture.

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

13. As an alternative to "_____ evolutionism" presented in evolutionary psychology, Albert Bandura proposed a _____

- A. bidirectional; unidirectional
- B. one-sided; bidirectional**
- C. dynamic; linear
- D. balanced; biased

Page: 51

Accessibility: Keyboard Navigation

APA LO: 1.2

Bloom's: Remember

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

14. A fertilized human egg cannot grow into a crocodile, duck, or fish specifically because of:

- A. social influence.
- B. environmental influence.
- C. adaptive behavior.
- D. genetic code.**

Page: 52

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Understand

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

15. _____ is a complex molecule with a double helix shape, like a spiral staircase, and contains genetic information.

- A. RNA
- B. Chromosome
- C. DNA**
- D. Ribosome

Page: 52

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

16. _____, the units of hereditary information, are short segments of deoxyribonucleic acid (DNA). They direct cells to reproduce themselves and to assemble proteins.

- A. Genes**
- B. Chromosomes
- C. RNA
- D. Ribosomes

Page: 52

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

17. The nucleus of each human cell contains _____, which are threadlike structures made up of deoxyribonucleic acid (DNA).

- A. mitochondria
- B. ribosomes
- C. chromosomes**
- D. mesosomes

Page: 52

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

18. _____ are the building blocks of cells as well as the regulators that direct the body's processes.

- A. Genes
- B. Proteins**
- C. Ribosomes
- D. DNA

Page: 52

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Medium

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

20. Adam was diagnosed with cardiovascular disease, he participated in a research study in which his DNA as well as the DNA of others with cardiovascular disease was compared to the DNA of those who don't have the disease, in order to pinpoint the region in the human genome connected to the disease. This type of study method is referred to as:

- A. next-generation sequencing.
- B. linkage analysis.
- C. thousand genomes project.
- D. genome-wide association method.**

Page: 53

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Genes

21. Which of the following statements about the activity of genes is TRUE?

- A. Genes are not collaborative.
- B. A single gene codes for a single, specific protein.
- C. Genetic expression is unaffected by environmental factors.
- D. Events that occur inside of the cell can excite or inhibit genetic expression.**

Page: 54

APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Fertilization

24. During the process of _____, the cell's nucleus—including the chromosomes—duplicates itself and the cell divides resulting in the formation of two cells.

- A. meiosis
- B. osmosis
- C. fertilization
- D. mitosis**

Page: 54
Accessibility: Keyboard Navigation
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Mitosis

25. A cell that contains 46 chromosomes arranged in 23 pairs undergoes the process of _____ to produce two new cells, each containing the same DNA as the original cell, arranged in the same 23 pairs of chromosomes.

- A. mitosis**
- B. osmosis
- C. meiosis
- D. fertilization

Page: 54
Accessibility: Keyboard Navigation
APA LO: 1.2
Bloom's: Understand
Difficulty Level: Medium
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Mitosis

26. Which of the following is true of mitosis?

- A. Mitosis is the cellular reproduction that occurs to form the sperm and the egg cells.
- B. Mitosis results in the formation of four new cells.
- C. Mitosis results in the formation of new cells with 23 pairs of chromosomes.**
- D. Mitosis results in the formation of three new cells.

Page: 54

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Sources of variability

40. Ethel is 50 years old but appears much more aged. Most of Ethel's relatives have not lived past the age of 60. Which of the following genes are responsible for the accelerated aging that is observed in Ethel and her family members?

- A. Susceptibility genes**
- B. Longevity genes
- C. Vulnerability genes
- D. Mutated genes

Page: 55

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Sources of variability

41. _____ genes are those that make an individual less vulnerable to certain diseases and make it more likely for him/her to live till an older age.

- A. Susceptibility
- B. Longevity**
- C. Vulnerability
- D. Mutated

Page: 55

Accessibility: Keyboard Navigation

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Sources of variability

42. Erin is 90 years old. She has relatively good health, and is fully mobile. Most of Erin's blood relatives live to a ripe, old age. Which of the following genes might be responsible for this?

- A. Susceptibility genes
- B. Longevity genes**
- C. Vulnerability genes
- D. Mutated genes

Page: 55

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Sources of variability

43. Emma and Anna are identical twins who were adopted by different families a few weeks after birth. Although genetically identical, they grew up with different physical and psychological characteristics. For example, though both inherited a tendency to grow large, Anna was slim and athletic due to the active lifestyle practiced in her adoptive family. This variability can be explained by how:

- A. each zygote is unique.
- B. longevity genes can make an individual less vulnerable to certain diseases.
- ☒ C. for each genotype, a range of phenotypes can be expressed.
- D. mutated genes can be a source of genetic variability.

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Dominant-recessive genes

52. Mary's mother has blonde hair and her father has brown hair. Mary has a gene for brown hair and a gene for blonde hair. She has brown hair. This indicates that the gene for brown hair is a:

- A. dominant gene.**
- B. recessive gene.
- C. susceptible gene.
- D. longevity gene.

Page: 56

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Dominant-recessive genes

53. Carrie's parents have brown hair. However, Carrie gets genes for blond hair from both of her parents, and as a result she has blonde hair. This indicates that the gene for blonde hair is a:

- A. recessive gene.
- B. dominant gene.
- C. susceptibility gene.
- D. longevity gene.

Page: 56

Accessibility: Keyboard Navigation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.2: Describe what genes are and how they influence human development.

Topic: Dominant-recessive genes

54. A(n) _____ gene overrides the potential influence of a recessive gene.

- A. longevity
- B. dominant
- C. susceptible
- D. aggressive

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Active genotype-environment correlations

121. According to Sandra Scarr, passive genotype-environment correlations are relatively more common in the lives of:

- A. infants and young children.**
- B. older children.
- C. adolescents.
- D. adults.

Page: 67-68

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Evocative genotype-environment correlations

122. Which of the following is an example of a passive genotype-environment correlation?

- A. Uncooperative, distractible children receive more unpleasant and disciplinary action from parents and teachers.
- B. Outgoing children tend to seek out social contexts in which to interact with people.
- C. Parents who have a genetic predisposition to be musically inclined encourage their children to learn how to play a musical instrument.**
- D. Infants who smile more receive more attention from the individuals in their social environment.

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Nonshared environmental influences

125. Behavior geneticist Robert Plomin has found that shared environment:

- A. is independent of heredity influences.
- B. accounts for most of the variation in children's personality or interests.
- C. is responsible for higher incidence of rivalry and aggression between siblings.
- D. accounts for little of the variation in children's personality or interests.**

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Shared environmental influences

126. Leila and Alexander are siblings. Every Saturday morning, Leila and her grandmother cook breakfast together and then do some errands and shopping together. During that time, Alexander and his grandfather spend some quality "male bonding" time. They like to play miniature golf or do yard work. The interactions that each child has with the grandparent would be known as what type of environmental experience?

- A. Shared environmental experiences
- B. Evocative genotype-environment correlations
- C. Nonshared environmental experiences**
- D. Shared experiences with peers

Topic: Gene $\times$ environment interaction

129. Name the theorist who published *On the Origin of Species*, in 1859, that outlined his/her theory of natural selection.

Charles Darwin

Page: 50

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

130. What is the behavior that promotes an organism's survival in the natural habitat?

Adaptive behavior

Page: 50

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

131. What is the psychological perspective that emphasizes the importance of adaptation, reproduction, and "survival of the fittest" in shaping human behavior?

Evolutionary psychology

Page: 50
APA LO: 1.1
Bloom's: Understand
Difficulty Level: Medium
Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.
Topic: Evolutionary psychology

132. What is a complex molecule, with a double helix shape, that contains genetic information?
DNA (deoxyribonucleic acid)

Page: 52
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Genes

133. What are the short segments of DNA that are located on the chromosomes, and are considered to be the basic units of hereditary information?
Genes

Page: 52
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Genes

134. Cell division in the eggs and sperms. A cell duplicates its chromosomes and divides twice. This leads to the formation of four cells that contain only half of the genetic material of the parent cell. What is this process called?
Meiosis

Page: 54
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Meiosis

135. Palomar is pregnant. During the early stages of her pregnancy, the single zygote splits into two genetically identical replicas. Her doctor tells her she is going to have _____ twins.
identical (monozygotic)

Page: 55
APA LO: 1.3
Bloom's: Apply
Difficulty Level: Medium
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Sources of variability

136. Xiomarra is tall with dark curly hair and brown eyes. She is outgoing and friendly. Name these observable characteristics of her genetic makeup.
Phenotype

Page: 55
APA LO: 1.3
Bloom's: Apply
Difficulty Level: Hard
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Sources of variability

137. A chromosomal abnormality is characterized by an extra copy of chromosome 21. A person with this disorder typically has a round face, a flattened skull, an extra fold of skin over the eyelids, a protruding tongue, short limbs, and retardation of motor and mental abilities. What is this disorder called?
Down syndrome

Page: 56
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Down syndrome

138. Violet is undergoing a prenatal test where the doctor takes a small sample of the placenta and then analyzes it to detect genetic defects and chromosomal abnormalities. Name the procedure she is undergoing.

Chorionic villus sampling (CVS)

Page: 61
APA LO: 1.3
Bloom's: Apply
Difficulty Level: Hard
Learning Objective: 2.3: Identify some important reproductive challenges and choices.
Topic: Chorionic villus sampling

139. Name a prenatal medical procedure in which a sample of amniotic fluid is withdrawn by a syringe and tested for chromosomal or metabolic disorders.

Amniocentesis

Page: 61
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.3: Identify some important reproductive challenges and choices.
Topic: Amniocentesis

140. Yelena is an outgoing person, therefore, people naturally tend to like her and find her personable. According to Scarr-McCartney, which genotype-environment interaction does this best represent?

Evocative genotype-environment correlation

Page: 67-68
APA LO: 1.2
Bloom's: Apply
Difficulty Level: Medium
Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development
Topic: Evocative genotype-environment correlations

141. Deshawn believes that development is the result of an ongoing, bidirectional interchange between heredity and the environment. He has most likely adopted which theoretical perspective?

Epigenetic view

Page: 69
APA LO: 1.2
Bloom's: Understand
Difficulty Level: Medium
Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development
Topic: Epigenetic view

142. Explain the genome-wide association method and how it has been used to help identify genetic variations of diseases?

Researchers obtained the DNA from those who have the disease (such as glaucoma or Alzheimers) and those who did not have the disease. Then they purified the DNA, and determined markers of genetic variation. If the genetic variation was more frequent in those with the disease, then that would point to the region in the genome connected to that particular disease.

Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Genes

143. List the four genetic principles. In your opinion, which do you think is the most serious and why?

Students' answers may vary. The four genetic principles are: dominant-recessive genes principle, sex-linked genes (X-linked inheritance), genetic imprinting, and polygenic inheritance.

Page: 56
APA LO: 1.3
Bloom's: Apply
Difficulty Level: Medium
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Dominant-recessive genes
Topic: Genetic imprinting
Topic: Polygenic imprinting
Topic: Sex-linked genes

144. List four sex-linked chromosomal abnormalities.

Klinefelter syndrome, fragile X syndrome, Turner syndrome, and XYY syndrome are all sex-linked chromosomal abnormalities.

Page: 57
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Sex-linked genes

145. List five gene-linked abnormalities.

Cystic fibrosis, diabetes, hemophilia, Huntington's disease, sickle-cell anemia, spina bifida, Tay-Sachs disease, and phenylketonuria (PKU).

Page: 57
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.2: Describe what genes are and how they influence human development.
Topic: Gene-linked chromosomal abnormalities

146. Name and describe three prenatal diagnostic tests.

Prenatal diagnostic tests include:

- 1) Ultrasound sonography where high-frequency sound waves are directed into the pregnant woman's abdomen and the echo from the sounds is transformed into a visual representation of the fetus's inner structures.
- 2) Fetal magnetic resonance imaging (MRI) where a powerful magnet and radio images are used to generate detailed images of the body's organs and structures.
- 3) Chorionic villus sampling (CVS) where a small sample of the placenta is removed to test for genetic defects and chromosomal abnormalities.

Page: 61
APA LO: 1.1
Bloom's: Remember
Difficulty Level: Easy
Learning Objective: 2.3: Identify some important reproductive challenges and choices.
Topic: Chorionic villus sampling
Topic: Ultrasound sonography

147. List three possible causes of infertility in women and in men. What are the two strategies that can be used to overcome infertility?

Lack of ovulation, producing abnormal ova, blocked fallopian tubes, and disease preventing implantation of the ova in the uterus, are some of the causes of infertility in women. Sperm lacking motility, low sperm count, and blocked passageways could be causes of infertility in men.

APA LO: 1.2
Bloom's: Understand
Difficulty Level: Hard
Learning Objective: 2.3: Identify some important reproductive challenges and choices.
Topic: Infertility and reproductive technology

148. Identify and describe the two common studies used by behavior geneticists to investigate the influence of heredity on behavior.

To study the influence of heredity on behavior, behavior geneticists often use either twins or adoption situations. In the most common twin study, the behavioral similarity of identical twins (who are genetically identical) is compared with the behavioral similarity of fraternal twins. In an adoption study, investigators seek to discover whether the behavior and psychological characteristics of adopted children are more like those of their adoptive parents, who have provided a home environment, or more like those of their biological parents, who have contributed their heredity. Another form of adoption study compares adoptive and biological siblings.

APA LO: 1.2
Bloom's: Understand
Difficulty Level: Hard
Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development
Topic: Behavior genetics

149. What are the three ways that heredity and environment are correlated as described by behavior geneticist Sandra Scarr.

Behavior geneticist Sandra Scarr described three ways that heredity and environment are correlated:

- 1) Passive genotype-environment correlations that occur because biological parents, who are genetically related to the child, provide a rearing environment for the child.
- 2) Evocative genotype-environment correlations that occur because a child's characteristics elicit certain types of environments.
- 3) Active (niche-picking) genotype-environment correlations that occur when children seek out environments that they find compatible and stimulating.

Page: 66
APA LO: 1.3
Bloom's: Remember

Difficulty Level: Medium

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Active genotype-environment correlations

Topic: Evocative genotype-environment correlations

Topic: Passive genotype-environment correlations

150. Assume that in the case study of the Jim and Jim twins, it was found that their similar development trajectories were a result of similar temperament and interests which caused them to seek out similar environments, which were compatible and stimulating to them. Which heredity-environment correlation is reflected in this scenario?

This would reflect the active (niche-picking) genotype-environment correlation that occurs when children seek out environments that they find compatible and stimulating.

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Active genotype-environment correlations

151. Define shared and nonshared environmental experience. Provide an example of each and point out how that example exemplifies the concept?

Shared environmental experiences are siblings' common experiences, such as their parents' personalities or intellectual orientation, the family's socioeconomic status, and the neighborhood in which they live. Nonshared environmental experiences are a child's unique experiences, both within the family and outside the family, that are not shared with a sibling. Different peer groups, different teachers, and different friends are examples.

Topic: Nonshared environmental influences

Topic: Shared environmental influences

152. Define Gene $\times$ environment ($G \times E$) interaction. Give an example of a study (either your own or one from the book) that could illustrate the interaction between genes and the environment.

Gene $\times$ environment ($G \times E$) interaction refers to the interaction of a specific measured variation in the DNA and a specific measured aspect of the environment. In a study, adults who experienced parental loss as young children were more likely to have unresolved attachment issues as adults only when they had the short version of the 5-HTTLPR gene. The long version of the serotonin transporter gene apparently provided some protection and ability to cope better with parental loss.

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.4: Explain some of the ways that heredity and environment interact to produce individual differences in development

Topic: Gene $\times$ environment interaction

153. What are some problems adopted children face at different points of development (infancy, early childhood, middle and late childhood, and adolescence)?

During infancy children might struggle with attachment, especially if parent's expectations aren't met. By early childhood, the child begins to ask where they came from. Thus, parents must decide when and if to tell the child that they are adopted. During middle and late childhood, the child tends to show greater interest in where they came from, their birth parents and why they were put up for adoption. By adolescence, as focus becomes more about physical appearance, the teenager might notice more about their physical difference from their biological parents, and be trying to determine their own identity.
